Indian Software Services

Thoughts on Upcoming Software & 30-Day Social Media Content Pack

---

Prepared for LinkedIn, Instagram, Facebook & X (Twitter). Copy, adapt tone, and post. Keep CTAs light; lead with operator pain.

Products in view: ISS Billing | IndHMS | SchoolERP | EduConvene | VetBook (early)

Part 1 ? Strategic thoughts (upcoming software)

---

1. Win the workflow, not the category label

India does not need another 'AI platform'. It needs software that survives a busy OPD, a fee counter at 9am, and GSTR filing week. ISS should keep shipping vertical workflows with shared multi-tenant DNA.

2. Role clarity is a product feature

Doctors should not see suggested totals. Teachers should not see payment gateway keys. Super Admins need Client ID formats and plans. Hide money from clinical screens; hide clinical noise from cashiers.

3. Compliance is the moat

GST splits, HSN/SAC, FY bill numbers, thermal + A4 print, audit logs, Client IDs ? these are not checkboxes. They are why a CA or hospital group stays. Double down on e-invoice readiness and cleaner tax exports next.

4. One family, clear edges

Billing, IndHMS, SchoolERP, EduConvene, and VetBook can share auth patterns, tenancy, and print discipline ? but each homepage must answer one job. Cross-sell after trust, not before.

5. Near-term roadmap bias

Next 90 days: (a) Doctor Station shows complete queues without pricing, (b) Billing Super Admin controls + GST/print polish, (c) SchoolERP onboarding reliability, (d) EduConvene check-in resilience, (e) VetBook discovery only ? no feature sprawl.

6. Distribution story

Sell to hospital groups, school networks, CA firms, and regional IT partners. Client-ID multi-tenancy is already partner-friendly. Package demos as 20-minute role tours, not feature dumps.

Part 2 ? How to use this pack

? Post 1x weekday on LinkedIn; 3?4x/week on Instagram/Facebook.
? Swap CTAs: demo link, DM keyword, or tag a vertical (clinic/school).
? Add a real screenshot weekly ? empty dashboards kill trust.
? Never invent patient/student data; use anonymized or demo tenants.

Part 3 ? Daily posts (30 days)

Day 1 ? Monday

Best for: LinkedIn / Instagram

Most Indian SMEs don’t struggle with sales. They struggle with clean GST invoices at scale.

ISS Billing helps hospitals, clinics, retail & service businesses raise Tax Invoices, track split payments (Cash/UPI/Card), and stay GST-ready ? under one multi-tenant platform.

If billing still lives in Excel, it’s time to upgrade.

#GSTBilling #SaaSIndia #Invoicing

Day 2 ? Tuesday

Best for: LinkedIn

Thought for builders: vertical software wins when it respects the operator’s day.

A receptionist needs speed. A doctor needs clinical clarity ? not pricing. A billing clerk needs GST accuracy.

That’s why our stack separates roles:
? IndHMS for clinical care
? ISS Billing for GST & collections
? SchoolERP for academics & fees

Same company. Different jobs. No clutter.

#ProductThinking #HealthTech #EdTech

Day 3 ? Wednesday

Best for: Instagram / Facebook

3 signs your clinic needs modern billing:

1. Invoices look different every week
2. UPI + cash totals never match the register
3. GSTR-1 prep starts with panic

ISS Billing: branded tax invoices, split payments, day book & collections reports.

Link in bio ? billing.indiansoftwareservices.com

Day 4 ? Thursday

Best for: LinkedIn

Upcoming software direction (ISS):

1. Deeper GST automation ? e-invoice readiness, cleaner GSTR exports
2. Clinical calm in IndHMS ? doctor views without billing noise
3. SchoolERP ? fees + academics in one tenant model
4. EduConvene ? event registration that actually reaches the floor via mobile
5. VetBook ? early-stage companion care, same product discipline

We’re not chasing every feature. We’re shipping the next boring, reliable workflow.

Day 5 ? Friday

Best for: LinkedIn / X

Friday product note:

Super Admins shouldn’t invent Client IDs by hand ? and doctors shouldn’t see "Suggested Total".

Small UX choices compound into trust.

This week we tightened platform controls on ISS Billing and kept clinical screens clinical.

What workflow are you still fighting with a spreadsheet?

Day 6 ? Saturday

Best for: Instagram

Weekend carousel idea (caption):

Slide 1: GST invoice in 60 seconds
Slide 2: Exclude vs Include GST ? clear pricing
Slide 3: Print A4 or thermal (80/58mm)
Slide 4: Super Admin onboards a new client
Slide 5: CTA ? Book a walkthrough

Caption: Professional invoices build professional businesses. ISS Billing.

Day 7 ? Sunday

Best for: LinkedIn

Sunday reflection for founders in Bharat:

Software isn’t the brand. Reliability is.

Uptime, readable invoices, role-based access, audit trails ? that’s what hospitals and schools pay for.

Indian Software Services is building that layer across billing, hospitals, schools, and events.

Quiet products. Loud outcomes.

Day 8 ? Monday

Best for: LinkedIn

Hospitals don’t need another dashboard. They need the right screen for the right role.

IndHMS Doctor Station: queue, vitals, diagnosis, Rx, ward notes.
Pricing stays with billing ? where it belongs.

Clinical focus = fewer mistakes = better care.

#IndHMS #HospitalManagement #DigitalHealth

Day 9 ? Tuesday

Best for: LinkedIn / Facebook

School ops tip:

If admissions, fees, and academics live in three tools, parents feel it first ? then your office does.

SchoolERP: multi-tenant school management built the same way we run billing for enterprises.

Day 10 ? Wednesday

Best for: Instagram

Poll: What’s your biggest billing pain?

A) GST confusion

B) Printing / branding

C) Cash + UPI reconciliation

D) Managing multiple branches/clients

Comment below ? we’re shaping the roadmap with operators, not slide decks.

Day 11 ? Thursday

Best for: LinkedIn

Product thesis for 2026?27:

India’s next useful software won’t look flashy. It will:

? Speak GST & UPI natively

? Work on mid-range hardware and thermal printers

? Respect roles (doctor ? cashier ? principal)

? Deploy as multi-tenant SaaS with Client IDs and audit logs

That’s the lane ISS is in.

Day 12 ? Friday

Best for: LinkedIn

Ship log (story format):

This sprint: platform Client ID formats for Super Admins, print preferences per user, GST pricing clarity on items, thermal + A4 themes.

Not glamorous. Extremely used.

If you run multi-location billing, follow along ? we’re building in public, carefully.

Day 13 ? Saturday

Best for: Facebook / Instagram

For CA firms & accountants:

Your clients still send WhatsApp photos of invoices.

Give them ISS Billing instead ? FY bill numbers, HSN/SAC, CGST/SGST/IGST, day book, collections by mode, GSTR-1 export.

You stay advisor. Software stays system of record.

Day 14 ? Sunday

Best for: LinkedIn

Upcoming: tighter product family under Indian Software Services.

Billing ? Hospitals ? Schools ? Events

Shared DNA: multi-tenant, India-first compliance, role clarity, print-ready documents.

indian softwareservices | billing.indiansoftwareservices.com

Day 15 ? Monday

Best for: LinkedIn
Myth: "We need a custom ERP."
Reality: You need reliable workflows and clear ownership.

Start with ISS Billing or IndHMS. Expand when the first workflow is boringly stable.

Day 16 ? Tuesday

Best for: Instagram
Before / After:
Before ? handwritten bills, mismatched UPI screenshots
After ? branded GST invoice + split payment record

Save this if you’re upgrading your front desk this quarter.

Day 17 ? Wednesday

Best for: LinkedIn
EduConvene reminder: events fail at check-in, not at marketing.

Admin dashboard + delegate mobile app = registration that survives the venue floor.

#EventTech #EduConvene

Day 18 ? Thursday

Best for: LinkedIn
Design principle we use:

If removing a number from the doctor’s screen reduces anxiety and doesn’t change care ? remove it.

Suggested totals belong in billing. Diagnosis belongs with the clinician.

Day 19 ? Friday

Best for: LinkedIn / X
Hiring attention (soft CTA):

Operators, hospital admins, school principals ? we want your friction list.
DM "ROADMAP" and tell us the one report you still build manually every month.

Day 20 ? Saturday

Best for: Facebook
Family-business Saturday:

Your second branch shouldn’t mean a second Excel file.

Multi-tenant Client IDs keep brands separate and reporting sane.

Day 21 ? Sunday

Best for: LinkedIn

Weekly thesis:

Compliance software should feel calm.

Calm comes from defaults that match Indian practice: GST slabs, UPI, thermal prints, FY sequences.

Day 22 ? Monday

Best for: LinkedIn

IndHMS + Billing together:

Clinical encounter in the morning. Clean invoice in the evening. No double entry drama.

Day 23 ? Tuesday

Best for: Instagram

Quick tip: Standardize invoice titles per profile ? Hospital vs Retail vs School.

ISS Billing profiles do that out of the box.

Day 24 ? Wednesday

Best for: LinkedIn

Reseller angle:

White-label ready thinking ? Super Admin provisions clients, plans, subscriptions.

Build a practice on top of infrastructure, not spreadsheets.

Day 25 ? Thursday

Best for: LinkedIn

VetBook (early): same care for companion animals will need the same discipline ? visits, Rx, billing boundaries.

We’re applying hospital lessons early, not reinventing chaos.

Day 26 ? Friday

Best for: LinkedIn

Ship small. Observe. Harden.

That’s how ISS products move from demo to daily dependency.

Day 27 ? Saturday

Best for: Instagram / Facebook

Weekend CTA:

Tag a clinic or shop still printing on plain paper. Gift them the idea of branded GST invoices.

Day 28 ? Sunday

Best for: LinkedIn

Month-ahead focus:

1) Make Doctor Station data-complete & price-free

2) Strengthen GST/export paths in Billing

3) Tighten SchoolERP tenant onboarding

Follow for build-in-public notes ? practical, not hype.

Day 29 ? Monday

Best for: LinkedIn

Question for operators:

Would you rather have 50 features, or 10 that never fail at 11am rush?

We pick the second. Every time.

Day 30 ? Tuesday

Best for: LinkedIn / Instagram

Closing note for this content pack:

Indian Software Services builds India-first operational software ? billing, hospitals, schools, events.

Start here: billing.indiansoftwareservices.com
Clinical: indhms.indiansoftwareservices.com

If this resonated, share it with one founder who still reconciles UPI on WhatsApp.

Closing

Consistency beats virality. Thirty honest posts about operator pain will outperform one hype launch. Indian Software Services earns attention by being useful at the counter ? then telling that story weekly.
